

### TURF

**Mowing:** Mowing height will remain unchanged until the start of the overseeding season.

**Herbicide:** Monument and SpeedZone will be applied for nutsedge control.

**General:** Turfgrass should be filled in except for shady areas where Bermuda does not grow. Continue to spray nutsedge with herbicide.

### SHRUBS

**Focus Pruning:** Normal maintenance pruning will be performed, while heat-sensitive shrubs will be left unpruned to prevent damage.

**General:** Shrubs may burn during periods of extreme temperatures. Leave damaged foliage on plants until the end of next month when the weather cools. If possible put off new plantings until September.

### TREES

**Scheduled Pruning:** All palm tree pruning was completed last month.

## HIGHLIGHTS

**Notes:** Extreme heat continues for the month of August. Landscapes and landscape workers will be struggling with these harsh conditions.
