INDIAN PALMS HOA

NOVEMBER 2026 | MONTHLY REPORT

TURF

Mowing: Overseeding was completed last month. The first mowing will be completed at a height of 1 1/2" this month.

Fertilization: Fertilizer will be applied after the first cut to support healthy growth and turf establishment.

Herbicide: Spraying is not scheduled this month.

General: Turf areas have probably been overseeded and the ryegrass is becoming established. Fertilize with a complete fertilizer after the first mowing of newly seeded grass. Add seed and mulch to any area that is thin or not germinating. Check irrigation in these areas to make sure it's working properly. Reduce irrigation as the weather cools.

SHRUBS

Focus Pruning: Sunburnt shrubs will be lightly trimmed to remove foliage and avoid further damage.

Herbicide: Spraying will continue to be completed for weeds in shrub beds.

General: Now is still a good time for any heavy pruning before the weather gets colder next month. This is still a good time for all types of new planting projects.

TREES

Scheduled Pruning: No tree trimming is scheduled.

HIGHLIGHTS

Notes: November continues with ideal temperatures for landscapes. November is usually a good month for most landscape projects.
