

TURF

Mowing: Overseeding season started late September continuing thru this month. CVAG Smart Scalping Guidelines will be followed, and some dry areas may appear as scalping approaches.

Herbicide: Glystar will be applied as needed for weed control.

General: Turf areas will be changing from the Summer Bermuda to Winter ryegrass. This process requires the gradual lowering of the existing turf to 1/2" and then overseeding with ryegrass. Irrigation will be reduced during the lowering process and then increased to 5 times per day for a couple of weeks while the seed is germinating. Mowing will resume 2-3 weeks after mowing.

SHRUBS

Focus Pruning: Sunburnt shrubs will be lightly trimmed, and damaged foliage removed once temperatures cool.

General: This is a good time to do any heavy pruning that may need to be done on shrubs that are overgrown. It is an ideal time for landscape planting projects. Fertilize shrubs to help them recover from summer damage.

TREES

Scheduled Pruning: Annual tree pruning started late September continuing thru this month until is completed.

HIGHLIGHTS

Notes: October is an ideal time for landscapes in the Coachella Valley. Temperatures are mild. This is the time of change when we change from the survival mode of Summer to Fall planting season
